ACCESS GOVERNANCE SOLUTION OFFERINGS

Access Governance Solutions are increasingly being deployed by organizations to achieve key objectives in the areas of Information Security and Compliance. Primary objectives for which an organization will consider Access Governance Solutions are:

- ▶ Gain Visibility into Who has access to what resources
- ▶ Entitlement Review and Certification – Provide Assurance that only right people have access to the right resources
- ▶ Identify Segregation of Duty Conflicts
- ▶ Engineer Roles and associated entitlements
- ▶ Build a closed loop system of identification of access rights violation and automation of remediation of access risks and validation of access change

Access Governance solution enables an organization to realize the following benefits:

- ▶ Achieve compliance goals
- ▶ Enhance security posture
- ▶ Ease security administration
- ▶ Reduce administrative costs.

ILANTUS brings in rich experience in Access Governance having executed many projects across the globe. The consulting arm “ILANTUS Advisory Services” offers Access Governance Consulting and Implementation solutions. Assessment of an organizations existing SoD posture and building the required SoD Matrix across key business critical applications is one of the key services that is offered. In addition, design and implementation of Entitlement Review Process with evaluation of SoD rules and Role Engineering are the other services offered by ILANTUS.

Solution Offering

ILANTUS is uniquely positioned as an organization with its extensive experience in the Domain of Identity and Access Management to offer the right strategy and solution to its customers for Role Management. ILANTUS recognizes the nature of Access Governance solutions and the usage patterns of the same across many organizations. ILANTUS is the first organization to offer Access Governance Solution on a Rental Basis.

Recognizing the nature of the solution, ILANTUS offers the Access Governance solution in three different models.

Traditional Software Purchase Model

In the traditional software purchase model, customers will be able to purchase the Access Governance as they purchase a software solution. Customers pay the entire cost of the software upfront and then pay annual maintenance. ILANTUS offers fixed price packages in this model that combines the software solution and professional services for implementation at a fixed cost. The package is available in three variants based on the number of users and the scope of work.

ACCESS GOVERNANCE SOLUTION OFFERINGS

Rental Model

In this model, customers get to use the Access Governance Solution on a rental basis. The solution is installed and configured On Premise. Customers have the right to use the solution on rental basis for 3 months or 6 months. Customers can extend the rental period if they desire to do so. At the end of the rental period, the software is returned to ILANTUS.

On Demand Model

Engineering of roles or reviews of user's access are activities that are not conducted through out the year. The very nature of the activity is such that they are conducted once a year at the minimum and twice a year at the maximum. Still organization's have to invest in the technology and the technology remains unused most of the time in the traditional software sourcing model. Ideal solution would be one where the solution is available on a pay as you use basis.

On Demand Model for Access Governance Solution ensures customers pay only for the usage of the solution. The solution is installed, configured On Premise. ILANTUS also manages the solution on an ongoing basis. Customers use the solution as and when needed and are charged for the solution usage. This model delivers maximum value as customers pay only for utilizing the solution.

In this model solution is configured on customer provided hardware or ILANTUS can provide the hardware. ILANTUS installs and configures the solution as per the requirements of the customer. Once configured ILANTUS administers and manages the solution remotely over a secure channel. Customers pay a onetime setup fee. The usage fee is calculated on a per user basis.

This solution offers significant benefits to customers:

- ▶ No up front investment for software that is used periodically
- ▶ Absolutely no costs related to training and retention of skilled people for administration and management
- ▶ On Premise Model ensures security and confidentiality
