## Exclusive Features of ILANTUS Xpress Sign-on for Banking

Banks have very exclusive business issues that require unique solutions. The large number of applications that a user deals with, usage of keyboards rather than mouse that many are more comfortable with, very large applications names, extremely high performance requirements and a host of many other needs drive the requirements for SSO in the banking sector.

ILANTUS Xpress Sign-on is the only solution in the world that caters to the exclusive requirements of banking users. Some of these features are listed below.

### End User Convenience

#### 1. Reach the application icon as you type application name.

##### Solution

User starts typing application name and application name that has matching characters comes up at left corner.

##### Business Benefits for a banker:

- a. Ease of search and usage.
- b. No Scroll of multiple applications.

#### 2. Frequently used applications (Favourites)

##### Solution

XSO learns user's application usage pattern and brings most frequently used applications on top.

##### Business Benefits for a banker:

- a. Ease of access.
- b. Saves time for accessing and increased productivity and convenience. No Scroll of multiple applications.

## End User Convenience

### 3. Navigate and Control SSO Launchpad using Keyboard Short-cut keys

#### Solution

The end users can navigate through SSO Launchpad using keyboard shortcuts. XSO also allows its users to perform following activities through Keyboard short-cuts:

- Access SSO applications
- Add/Delete applications to Launchpad

#### Business Benefits for a banker:

- Ease of access.
- Saves time for accessing and increased productivity and convenience

### 4. Application names to accommodate 44 characters

#### Solution

Administrator can name applications upto 44 characters.

#### Business Benefits for a banker:

User gets complete application name displayed and easy to identify application.

### 5. 3500 concurrent users' login

#### Solution

Spreading load between multiple servers, sites using MySQL replication and Load Balancer helps concurrency to reach even 3500 users for login to Xpress Sign On, if needed.

#### Business Benefits for a banker:

During peak hours, users will be seamlessly able to login to Xpress Sign On and do SSO to applications ensuring high-availability to bankers.

## Security & Compliance

### 6. Email OTP

#### Solution

While accessing critical application, OTP will be sent to user's email address.

#### Business Benefits for a banker:

Cost effective compared to SMS OTP. It will work for users who do not have smartphone for using Soft Token.

IT Team can leverage on existing email infrastructure.

### 7. Challenge Response as 2 Factor Authentication (2FA)

#### Solution

For accessing critical applications, user needs to answer answers(s) to Challenge Response (CR) question(s).

#### Business Benefits for a banker:

- Cost effective compared to SMS OTP.
- Usability for employees without Smartphone.
- Generic email address users i.e. users without individual email addresses, can also make use of CR.

### 8. Soft Lock to be initiated by user by pressing specific key/button on Launchpad

#### Solution

User can lock Launchpad by clicking on icon on Launchpad.

#### Business Benefits for a banker:

Security point of view, access to Launchpad is restricted only to legitimate user.

## About ILANTUS

**ILANTUS Technologies** specialises in the Identity, Governance and Access domain with a unique focus in **implementation and Managed Services**.
