

Fingerprint Access

Users are required to authenticate themselves and access the SSO solution to Single Sign-On to their target applications. Our solution provides users with the ability to authenticate themselves using Biometrics to log into the SSO solution. This can also be integrated with the client machine domain login system. E.g. a user can login to their client system such as a desktop or laptop to join the domain using a fingerprint. Once logged in, the user can be directly logged into the SSO solution through integration.

Users can also use Fingerprints as a step-up authentication method to access sensitive and protected applications from the SSO solution.

Get in touch with us to understand how Biometrics can be leveraged in the solution to provide secure access to users to their applications.

Xpress Sign On

Xpress Sign-On is a next generation Single Sign-On solution that provides users with seamless and secured access to any thick and web based on-premise or cloud application from any device, anytime and anywhere. With Express Sign-On, users have to sign-in once and they don't have to type their User ID/Password again and again. Built on industry leading and proprietary technologies, it offers a comprehensive suite of features that enable organizations to take control over its IAM challenges cost-effectively, quickly, and with ease.

Xpress IDaaS

An IDaaS solution can be prove to be the underlying layer of an organization's IT strategy and IT compliance policies. With its ease of adoption and use, organizations can save time, significantly improve compliance and increase IT productivity. With ILANTUS, the domain experience of 17 years coupled with our strength in world class technology enables our customers to achieve high value from their IDaaS investments and reap results year-on-year.
